

## SMART IDENTIFICATION & ACCESS STATION

Modular station for ID and photo identification of immigrants during landing operations

Movable smart gate station easy to connect to ship gangways

Safe routing of incoming migrant flows to speed up ID and photo identification operations

- Concurrent use of biometric acquisition to enable a faster and more complete on-site management of multi-database identity cross-check operations
- Operator desk cabled to the smart gate station for real-time management of identification and access operations
- Fingerprint scanning and high-resolution cameras for a better-quality imaging and a more effective biometric recognition
- Network and/or battery back-up power supply system with recharging system by solar panels placed on the station roof
- Retractable operator desk and wheels easing the moving and positioning of the identification station within the port area
